

SOVU
Blinds

Integral Blinds

for windows, doors & glass panes

The Sovu Integral Blind offers seamless and sophisticated solution for controlling light and shade for a more comfortable living space.

The elegant system removes the need for cleaning, offering a timeless and stylish design for maintenance-free blinds.

Thermal Insulation

Our double glazing blinds offer exceptional thermal insulation, significantly reducing heat loss and keeping your home comfortable every season.

Energy Saving

They reduce heating and cooling costs and protect the environment by increasing the energy efficiency of buildings.

Elegance & Resistance

Modern & functional blinds add value where installed. The integration of the blinds inside the double glazing makes them resistant to wear over time, with little maintenance.

Control Systems

Easy and effortless opening and closing of the curtains, both with manual and motorised control. Suitable for any window.

Advanced Adaptability

The Sovu Integral Blinds offer functionality, flexibility and resistance with their innovative design and is suitable for multiple applications.

Safe & Durable

The advanced mechanism is designed to ensure optimal safety and long-lasting performance of the product.

SOVU Integral Blinds

The blinds are available in a number of customisable options including finishes and aluminium channels.

Finishes

With 9 finishes to choose from, you'll find the perfect fit for your project.

Aluminium Channels

Our blinds are available with aluminium channels in either:

20mm
22mm
27mm

Motorised Controls

Our motorised system is the first and only rechargeable battery system with European patent.

With a wireless magnetic actuator and electronic management outside the glass, the system is battery operated to move up & down.

Available with or without photovoltaic panel. Also adaptable to sliding windows.

Manual Controls

The Sovucord is the manual magnetic system that allows the lifting and orientation of the slats through the use of two magnets.

The external control applied to the glass consists of a closed loop cord that, when moving, rotates the two magnets in order to position the blind in the desired way.

SMART App

For a smarter way to control the SOVU motorised blinds, our smart control unit and AI-Sun app allows you to manage blinds, tilt slats, create light scenarios and so much more from your mobile device.

Available for both android and iOS systems, the smart control unit allows you to control the blinds remotely with tilting, raising and lowering functions. By setting a unique weekly schedule, you can customise the blind control to suit your daily lifestyle and indoor environments.

This feature is also compatible with home automation system controls and is even suitable for blinds also previously installed.

Remote Control

The motorised integrated blind is operated by an external device, fully equipped with magnetic connection and rechargeable battery.

As an optional extra, we offer a remote control for ease of use. The control can be used remotely from across the room, for instant light control at the press of a button.

N.B: Please note these accessories are only available for the motorised integral blinds only. Manual cord-operating blinds can only be used via the knob control.

Battery Actuator

Another addition to our market-leading blind accessories is our innovative battery actuator.

This creates a safety lock, ensuring the blind can only be operated when the window is closed. The blind stops if the window is out of square or if in the open position.

This system prevents cord tangling and scratches on the coating, for longer-lasting performance.

Solar Control & Privacy

The Sovublind is the ideal solution for multiple residential and commercial settings.

Available in venetian blind, filtering pleated blind, filtering honeycomb blind and blackout honeycomb blind, the double glazed unit offers a variety of design styles to suit spaces.

For additional privacy in various spaces, the blind can be lowered and tilted for ample light control.

Integral blinds are the perfect solution for controlling heat and glare from the sun. They can also be operated via motorised or manual controls, allowing users to adjust at their convenience. They provide excellent privacy and shading, making them a versatile and stylish alternative to curtains or blinds- which is particularly useful for large glass units.

At Sovu, we believe in only the best.

That's why we've partnered with industry experts to bring reliable, trustworthy systems that last for many years to come.

Plus, advanced technology our blinds are designed to optimise energy efficiency and thermal performance, for a more comfortable living environment.
